Team Project, Milestone 3, Final Submission

- Due May 3, 2019 by 11:59pm
- Points 100
- Submitting a file upload
- File Types java, jpg, png, jpeg, css, txt, zip, jar, and json
- Available until May 3, 2019 at 11:59pm

This assignment was locked May 3, 2019 at 11:59pm.

Milestone 3: is now due before 11:59pm Friday May 3rd.

Please re-build your executable.jar and team.zip and RESUBMIT on or before Friday 5/3.

The manifest.txt and Make were missing class-path information, which has been added.

Download these files to your project directory and run "make jar" and "make runjar" to confirm it works

1. [MakefileLinks to an external site.](#)

2. [manifest.txtLinks to an external site.](#)

3. Submit or resubmit your team.zip (contains application/*.java and all other supporting files)

[grading-rubric-tentative.pdfLinks to an external site.](#)

Team Project Objectives

- work together in a performing team
- [Click here for tips to use Git, Eclipse, Java FX, for your Team Project Work FlowLinks to an external site.](#)
- design a multi-class GUI program
- implement that program using Java FX
- consult with a TA regarding design and implementation choices
- complete a medium sized project

A-Team

This project must be completed as part of an A-Team. Students who do not complete as part of a team will lose some points for not completing that part of the assignment work.

[Create and join an ATEAM](#)[Links to an external site.](#)

Description (100pts)

Complete your Java FX program that solves this problem:

[Team Project -- Quiz Generator](#)[Links to an external site.](#)

Requirements

- **All source files must be in package application**
- **You must build team.zip** to that it contains all files needed to build and run your program, including but not limited to:
 - README.txt
 - application/* (all source files)
 - java (code) files
 - image source files
 - style (css) files
 - screenshot_start.png
 - screenshot_end.png
 - executable.jar
 - manifest.txt and Makefile (are helpful but not required)
 - any other files that are required to build and run your program (jpg, png, json, txt)

Submission

You must build an executable.jar and team.zip and upload team.zip. Follow these instructions.

1. [Compile and run your Java FX program on a CS Linux Workstation](#)[Links to an external site.](#)
2. [BUILD Team Project](#)[Links to an external site.](#)
3. [Create team.zip here](#)[Links to an external site.](#)
4. **Upload team.zip to this assignment submission page**
5. Repeat above steps if your program changes.

NOTE: you must create **team.zip** as described in the links (above) and **team.zip** must contain all files as described.

Tip: Practice creating team.zip and submitting before the assignment is due. It may take you some time to correctly understand and follow all build instructions.

The instructions assume that you are logged in to and working from a CS workstation. Some instructions will not work if you are connected remotely.

[ALL TEAM MEMBERS] Check that your submitted team.zip file contains the following structure:

README.txt
executable.jar
screenshot_start.png
screenshot_end.png
application/*

(all required files to build and run your program)

Submission

Submitted!

May 2, 2019 at 3:08pm

[Submission Details](#)

[Download team-4.zip](#)

Grade: 95 (100 pts possible)

Graded Anonymously: no

Comments:

A-team 76 We don't have executable.jar, always throw errors when trying to create it (doesn't recognize the symbol JSONArray). So please just run the Main program.

ZIHENG ZHANG, Apr 30, 2019 at 1:13pm

WE WILL POST A FIX THIS AFTERNOON.....PLEASE WATCH YOUR EMAIL FOR A NEW MAKEFILE AND MANIFEST FILE AND PLEASE RESUBMIT

Andrew KUEMMEL, May 2, 2019 at 12:26pm

Read the last session of README.txt.

ZIHENG ZHANG, May 2, 2019 at 3:08pm

See attached files.
